**O.KDETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-7, 9-19 and 21-24 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Specifically, both claims 1 and 13 are amended to recite the limitation "whether the predetermined signal sequence or the arbitrary random signal sequence is reproduced depends on the edge shift amount". In the Remark filed 7/06/08, Applicant points to page 43, line 19 to page 44, line 27 of the specification to support the amendment. However, Examiner cannot find support in the noted or any other section of the specification that describes how a specific signal is reproduced depending on the edge shift amount. The section Applicant points to describe the advantage of using arbitrary random sequence.

Accordingly, claims 1 and 13 include subject matter that fail to comply with the written description requirement.

3. Claims 1-7, 9-19 and 21-24 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

As mention earlier, both claims 1 and 13 are amended to recite the limitation "whether the predetermined signal sequence or the arbitrary random signal sequence is reproduced depends on the edge shift amount". However, such limitation does not make sense when considering the claim as a whole. For example, the claims are directed to generating a reproduction signal based on either a predetermined signal sequence or an arbitrary random signal sequence. The edge shift amount is measure using the reproduction signal, and recording pulse is change based on the edge shift amount. Essentially, the step of generating a reproduction signal could not depend on the edge shift amount because the edge shift amount has not been measured yet.

Accordingly, claims fail to comply with the enablement requirement.

#### ***Response to Arguments***

4. Applicant's arguments with respect to claims 1-7, 9-19 and 21-24 have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be

calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
